INFORMATION FOR THE JUDGE

From the SRK Breeding Committee by commission from the SRK board

Approval for breeding

The SRK has laid down some principal qualifications for pedigree cats that are used for breeding. These qualifications are as follows:

If the owner wants to have more than one litter from a male or female the cat has to have an Excellent-judgement before it is mated for the second time. This Excellent-result is only valid from open class. If there is a certain reason why the cat cannot get an Excellent-result then it is possible to seek approval for breeding through control class.

For the cat to be approved for breeding through control class the owner fills in a form called approval for breeding. From this form the judge can read the specific reason that inhibits the cat from getting an Excellent-result. As this procedure is unofficial by FIFe rules it is possible and even desirable that the judge looks at the pedigree of the cat. The owner may present the pedigree. The owner is also best suited, in this case, to present the cat to the judge because the judge may if necessary ask questions about the cat, its background and breeding purposes.

The cat should be judged focusing on its breeding value. You may fill in the normal report, but please fill in Your approval on the attached form. As with other control class cases it is necessary that the form is signed by two (2) judges.

The meaning of this procedure is to ensure that all cats used for continual breeding in Finland meet a certain standard.

Please ask the show secretary for help if necessary (for translations etc).
